

# Common questions buyers have for BaseN Platform

#1

**How easily can your platform connect with our existing data management systems, such as our database or data warehouse?**

We can co-exist and integrate with other systems, no matter if they are highly developed or just in the beginning. BaseN always ensures continuous and secure operations as well as a constantly evolving ecosystem for the customers.

#2

**How does your platform handle large-scale deployments with a high number of devices and sensors?**

Scalable, fault-tolerant and distributed architecture are the original principles on which we've built BaseN Platform. We have control over the full value chain so we can provide maximum scalability, and we have a proven track record of being the engine for managing millions of data points from countless sources.

#3

**What security measures are in place to protect against unauthorized access to devices and data?**

BaseN uses detailed traffic analysis to detect anomalies and alert users about suspicious activity. We monitor traffic patterns across numerous measurement points and can identify changes in traffic patterns. BaseN does not outsource any responsibility to a third-party cloud provider, thereby providing exceptional security guarantees. BaseN Platform is capable of detecting various types of security attacks by identifying abnormal performance behaviors in devices, systems, and complex networks.

#4

**What types of insights and reports can be generated from the data? Does the platform provide customizable reporting features?**

Yes. BaseN Platform allows for both real-time and historical reporting, providing a comprehensive view of the data collected. The platform also offers a set of standard vendor-based reports that cover common metrics and performance indicators. The platform goes beyond standard reports by providing the flexibility to create advanced, tailor-made customer reports. These reports can be customized to meet specific requirements and provide actionable insights relevant to the user's unique business needs. By analyzing the collected data in a highly customizable manner, the platform empowers users to derive meaningful conclusions and make informed decisions.

#5

**What level of customization is possible within the platform?**

BaseN Platform offers unparalleled flexibility and customization, allowing you to tailor solutions to your specific needs and business contexts. Whether you choose to utilize the platform in its entirety or leverage our universal APIs to seamlessly integrate with your existing systems, BaseN empowers you to build the customized solutions you desire. The possibilities are endless when you have the freedom to create on top of our versatile platform.
